Understanding inflation

The inflation rate is calculated from the prices of a range of different goods and services selected to represent average spending patterns in the UK. The Office for National Statistics monitors changes in these prices each month, and uses this to work out an average increase for the year. The different items in the 'basket' of goods and services are given different weights, so that things we spend more on, such as housing, motoring and food, are given more importance.

For more information on inflation see www.statistics.gov.uk or www.incomesdata.co.uk

Base Lending Rate for February 2006 is 4.5%
