

TUC Women's Forum Presents

Women's Health Event

6 October 2011

Menopause

How does it affect women and men, in the workplace and at home?

Did you know?

Premature menopause is defined as the early onset of menopause before the age of 45 ?

Hot flushes and difficulty with memory and concentration are well recognised menopausal symptoms. ?

These are also symptoms of andropause, (commonly known as male menopause) which can be identified through male testosterone. ?

The aims of the event are:

- to raise awareness of the issues around how the menopause affects women of *all* ages in the workplace
- discuss how it impacts on partners and family life

There will be group activities, a guest speaker from the medical profession and a Q&A session, at the end of which it is intended to produce:

- a model agreement for employers
- a model motion to take back to branches
- useful Resources and information pack

10.00am

to

3.30pm

at

TUC Office

33 Park Place

Leeds

LS1 2RY

The event is FREE. All trade union members of any age and gender are welcome.

Come along - bring a friend - be informed
